

Company Wizard Plus

Usage:

Company Wizard Plus currently offers six functions.

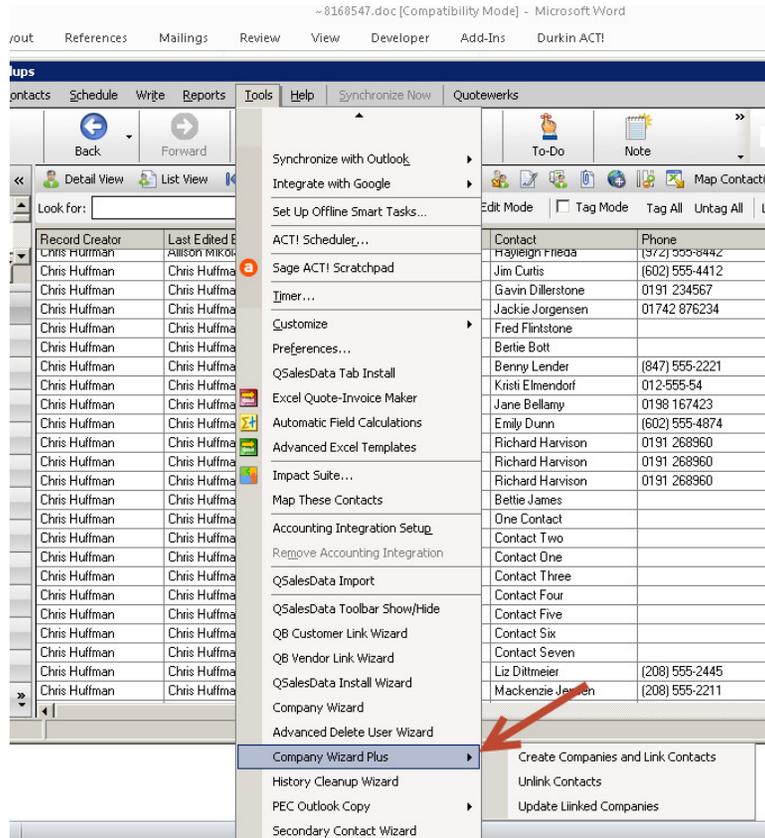

1. Create Company Records and Link Contact Records to the Company Records. For detail on this function, see below.
2. Unlink Contact Records from Company Records. For detail on this function, see below.
3. Update Linked Fields in Contact Records from Company Records. For detail on this function, see below.
4. Update Linked Fields in Company Records from Contact Records. For detail on this function, see below.
5. Flatten an individual Company Hierarchy. For detail on this function, see below.
6. Delete the selected (highlighted) Companies from the Company List. For detail on this function, see below.

Company Wizard Plus

Create Companies and Link Contacts Function

Usage:

1. Open ACT! and switch to the CONTACT LIST view.
2. Do a lookup and tag the contacts you want to process. If you want to process all contacts, use “Tag All” to tag all the contacts.
3. Click on Tools and then on Company Wizard Plus and select the Create Companies and Link Contacts menu item.
4. You will get a dialog box to confirm your action and to specify processing options.

The Image below shows the dialbox that opens when you choose Companies and link Contacts. Select the pairs of fields in the Contact and Company records that will be used to match Contact and Company records. The default is to match just on Company Name and these fields will be preselected in the dropdown boxes. To use different fields or additional fields select the field names in the dropdown boxes. Examples of user are below this image.

Company Wizard Plus for ACT!

The Company Wizard Plus function will create and link Company records for the tagged records in the current contact list. Is this what you want to do? If so specify your match fields below.

Contact Fields

Company Fields

Options - and you want me to ...

- Link Contacts to Companies as you process them
- Don't Create Companies - just link if you can
- Process Contact records with Blank Fields
- Associate Contacts to Companies as you process them

Version 2.0.0.26

Buttons: Help, Yes, continue, No, cancel

For example, if you work with the same company name at multiple locations, one possible set of match fields would be Company Name, City, and State. Another example, you may have imported into ACT! the account records (as Companies) from your accounting software, and also imported the contact names as contacts, and you brought the account numbers into both records. You could link companies and contacts on this account number field in both records.

Note: You must select the same number of fields from the Contact and the Company records for matching purposes. You will get an error message if you do not select the same number of fields for both record types.

You can now select from the following options for creating company records and linking contacts to them.

- To link contacts to company records select the first check box "Link Contacts to Companies as you process them".
- To link contacts to existing company records, select the first and the second check box "Don't Create Companies - just link if you can". This selection will not create new company records. Only contacts that match existing company records will be linked.
- If you want to associate contacts with companies but not link them, select the bottom check box "Associate Contacts to Companies as you process them". Associated

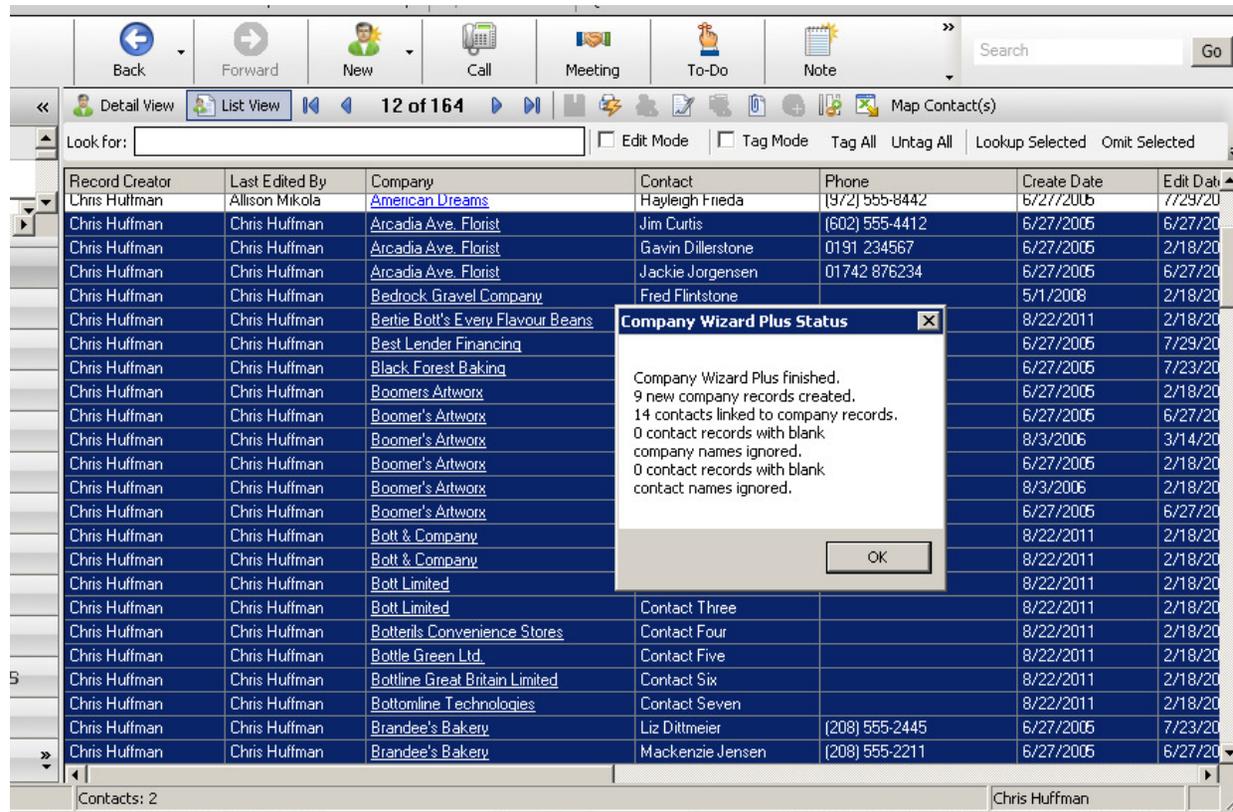

Contacts appear in the Contacts tab of the Company Detail View but the fields in the Contact record will not get updated by using the built-in Companies/Update Linked Contacts action or the Company Wizard Plus Update Linked Contacts function. If you want to build companies during this process then make sure that the "Don't Create Companies" box is unchecked. If you do not want to build companies during this process, make sure that the "Don't Create Companies" check box is checked.

- Normally, Contact records with blank match fields are considered incomplete records and they are bypassed. To force the processing of contact records with blank match fields, check the "Process Contact records with Blank Fields" check box. In this case the blank value is considered as on valid value in the field.

Note: Contact records with blank Company names are always bypassed. This is because, if a company records is attempted to be created from the contact record, the company record is required to have a non-blank Company name.

When you are ready to process the selected Contact records with the selected options, click **YES, CONTINUE**.

You will now see a progress box. If you change your mind during the process, click Cancel. However, company records that have been created and contact records that have been linked or associated will not be rolled back.

A final box will show you the results of the operation.

Company records have been created and linked as requested.

Notes:

There is a known interaction with Company Wizard Plus and the Contact List Plus product from Durkin Computing, LLC.

If you are using Contact List Plus, Company Wizard cannot find the contacts that you have selected and therefore has nothing to process. This is an issue with the way that both products interact with ACT! itself and is not something that can be fixed by either add-on vendor.

To use Company Wizard in this environment, you must temporarily turn off Contact List Plus using its control dialog found under Tools/Contact List Plus or Tools/Durkin Impact Suite. This brings up the "About Contact List Plus" dialog box. Deselect the check box "Use Contact List Plus (Master Switch)". This will revert ACT! to using the built-in Contact List function. Use the built-in Contact List to tag contacts and process them through Company Wizard Plus.

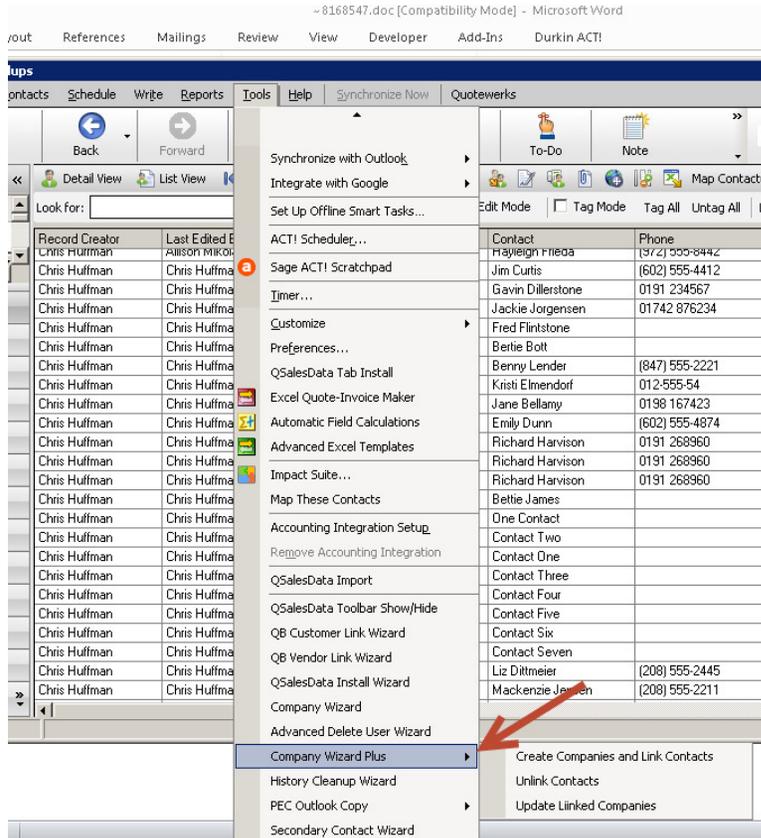

When you are done with Company Wizard, use the Tools/Contact List Plus dialog box to turn Contact List Plus back on (check the box next to "Use Contact List Plus (Master Switch)").

Company Wizard Plus

Unlink Contacts Function

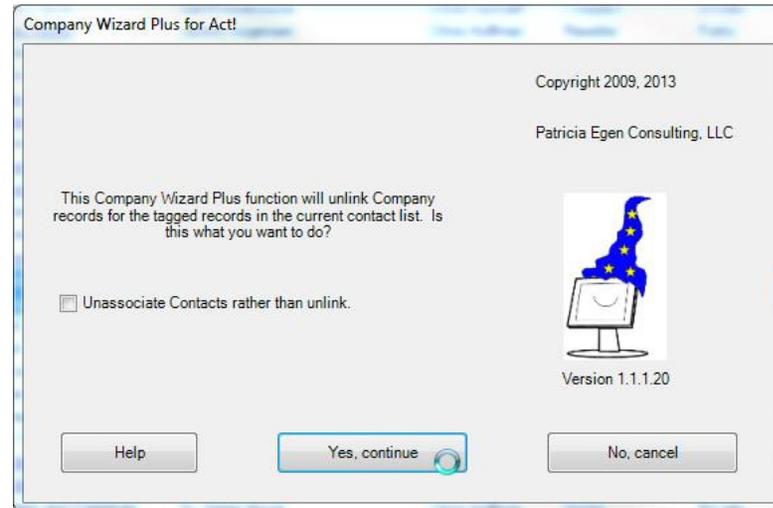

Usage:

1. Open ACT! and switch to the CONTACT LIST view.

2. Do a lookup and tag the contacts you want to process. If you want to process all contacts, use “Tag All” to tag all the contacts.
3. Click on Tools and then on Company Wizard Plus and select the Unlink Contacts menu item.

You will get a dialog box to confirm your action and offer the option to UnAssociate rather than UnLink the tagged contacts.

If you want to unassociated rather than unlink the contacts from their company records check the box.

When you are ready to process the selected Contact records with the selected options, click YES, CONTINUE.

You will now see a progress box. If you change your mind during the process, click Cancel. However, any unlinking or unassociating already performed will not be rolled back.

A final box will show you the results of the operation. Company records have been unlinked or unassociated as requested.

Chris Huffman

There is a known interaction with Company Wizard Plus and the Contact List Plus product from Durkin Computing, LLC. If you are using Contact List Plus, Company Wizard cannot find the contacts that you have selected and therefore has nothing to process. This is an issue with the way that both products interact with ACT! itself and is not something that can be fixed by either add-on vendor. To use Company Wizard in this environment, you must temporarily turn off Contact List Plus using its control dialog found under Tools/Contact List Plus or Tools/Durkin Impact Suite. This brings up the "About Contact List Plus" dialog box. Deselect the check box "Use Contact List Plus (Master Switch)". This will revert ACT! to using the built-in Contact List function. Use the built-in Contact List to tag contacts and process them through Company Wizard Plus. When you are done with Company Wizard, use the Tools/Contact List Plus dialog box to turn Contact List Plus back on (check the box next to "Use Contact List Plus (Master Switch)").

Company Wizard Plus

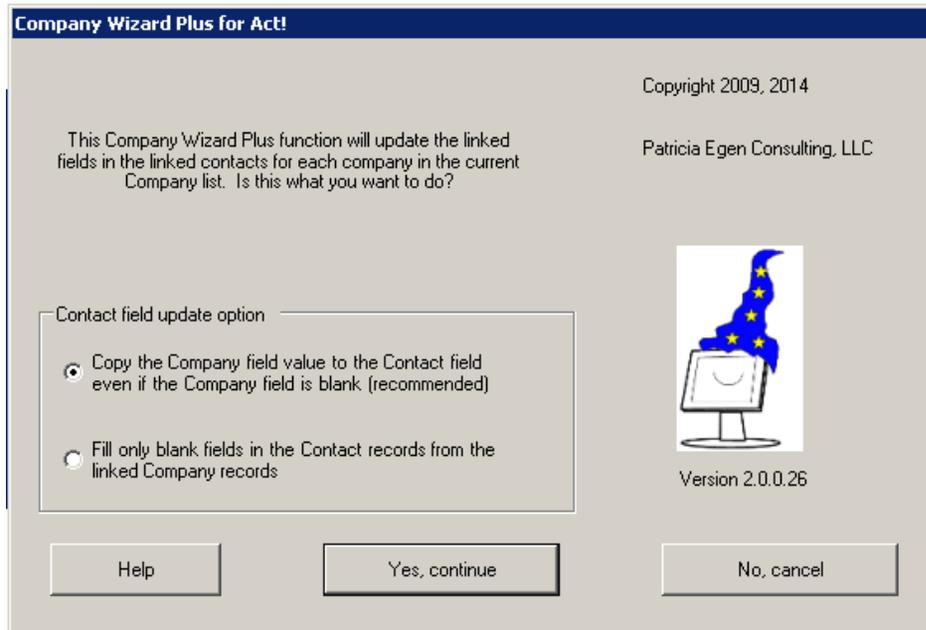

Update Linked Contacts Function

Usage:

1. Open ACT! and switch to the COMPANY LIST view.
2. Do a lookup of the companies you want to process. If you want to process all companies, do an explicit Lookup/All Companies to ensure that the proper list will be found by the tool.
3. Click on Tools and then on Company Wizard Plus and select the Update Linked Contacts menu item.
4. You will get a dialog box to confirm your action.

The screenshot shows the ACT! software interface. On the left, there is a list of contacts with columns for 'Create Date' and 'Territory'. The 'Create Date' column contains various dates from 8/11/2003 to 8/11/2003. The 'Territory' column is empty. The 'Company Wizard Plus' menu is open, showing options like 'Update Linked Contacts' and 'Delete Selected Companies'. The 'Update Linked Contacts' option is highlighted. The background shows a list of contacts with phone numbers in the 'Phone' column.

Create Date	Territory	Phone
8/11/2003		(423) 555-1221
8/11/2003		(972) 555-6225
8/11/2003		(602) 555-4412
2/18/2014

8/11/2003		(480) 555-2146
8/5/2003		
6/27/2005		
4/29/2009		(212) 555-2485
4/29/2009		(212) 555-2485
8/1/2003		(212) 555-2485
2/23/2004		(212) 555-2485
2/23/2004		(212) 555-2485
6/27/2005		
6/27/2005		
8/5/2003		(214) 555-4652
10/29/2009		
8/3/2006		0191 345678
8/11/2003		(735) 542-1423
8/11/2003		(405) 555-0000
8/11/2003		
8/11/2003		

Here you can select from one of two modes of operation.

- The first option copies the field value from the company record to the contact record unconditionally. This option will even overlay a non-blank value in a contact record with a blank value from the company record. This is the recommended option as it follows the expectation that the contact fields will be exactly the same as the linked company fields.
- The second option only fills empty fields in the Contact records with non-empty values from the linked company records. Note that this is not the normal way that linked fields are supposed to work so that is why this is not the recommended nor default option.

When you are ready to process the selected Company records with the selected options, click YES, CONTINUE.

You will now see a progress box. If you change your mind during the process, click Cancel. However, any field updating already performed will not be rolled back.

A final box will show you the results of the operation.

Contact records have been updated as requested.

Company Wizard Plus

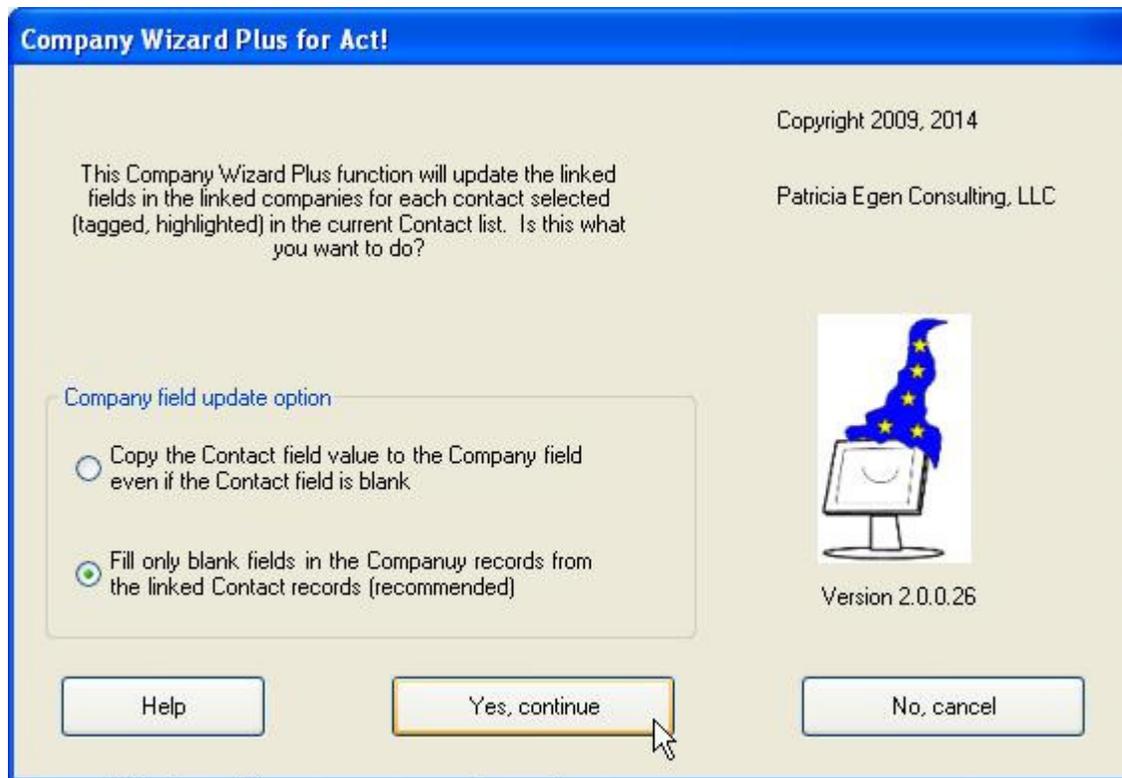

Update Linked Companies Function

Usage:

1. Open ACT! and switch to the CONTACT LIST view.
2. From the contact list select (highlight, tag) the contacts you want to process. If you want to process all contacts in your current Contact List then use the Tag All button at the top of the Contact List screen so highlight all the displayed contacts.
3. Click on Tools and then on Company Wizard Plus and select the Update Linked Companies menu item.

You will get a dialog box to confirm your action.

Here you can select from one of two modes of operation.

- The first option copies the field value from the contact record to the company record unconditionally. This option will even overlay a non-blank value in a company record with a blank value from the contact record. This is not the recommended option as the original intent of this process is to attempt to complete a possibly incomplete company record with information from linked contacts
- The second option only fills empty fields in the Contact records with non-empty values from the linked company records. This is the recommended option as noted above.

When you are ready to process the selected Contact records with the selected options, click YES, CONTINUE.

You will now see a progress box. If you change your mind during the process, click Cancel. However, any field updating already performed will not be rolled back.

A final box will show you the results of the operation.

Company records have been updated as requested.

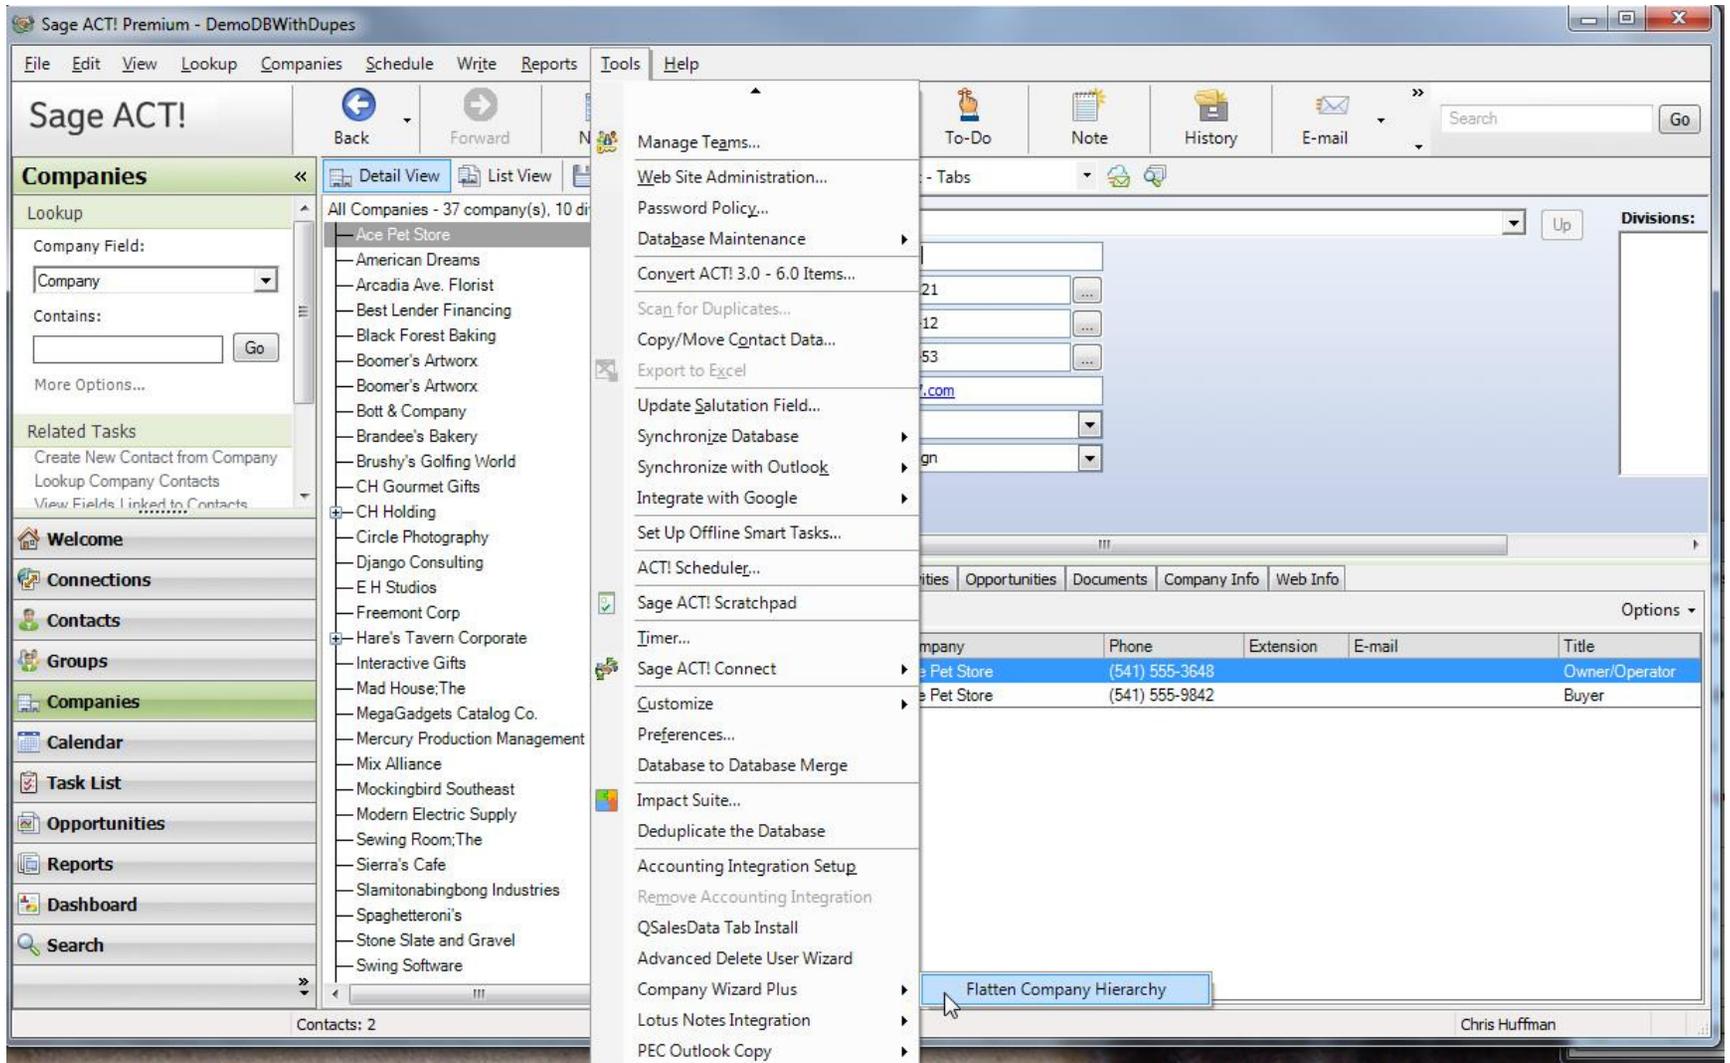

Company Wizard Plus

Flatten Company Hierarchy Function

This function moves all Sub-divisions of the displayed Company record to be immediate children (just Divisions) of the displayed Company record. Thus a multi-level Parent Company/Division/Sub-division hierarchy is flattened to a two level Parent Company/Division hierarchy only.

Usage:

1. Open ACT! and switch to the COMPANY Detail view.
2. Display the Parent Company (or Company Division) you want to flatten
3. Click on Tools and then on Company Wizard Plus and select the Flatten Company Hierarchy function.

The work is done immediately and the response is a confirmation box when the work is done.

Company Wizard Plus

Delete Selected Companies Function

This function deletes the selected (highlighted) companies from the Company List. This allows multiple companies to be deleted in one operation. Although this function is available built-in to Act! v16 this brings this function to earlier versions of Act!

As this process is destructive and there is no Undo action make sure you have a backup of your Act! data base in case you delete a company record that you really wanted.

Usage:

1. Open ACT! and switch to the COMPANY List view.
2. Select using the mouse, left shift key, and/or left control key the Companies to be deleted.
3. Click on Tools and then on Company Wizard Plus and select the Delete Selected Companies option.

Update Linked Contacts

Delete Selected Companies

A window comes up saying that you are about to delete the selected companies in the list.

Move the click the Yes, continue button if you are sure you want to proceed.

Another warning box comes up asking again if you want to proceed.

If you are really sure click the Yes button. Delete processing then begins.

A Progress box will appear and increment as the deletion process continues. Press the Cancel button on the Progress box to interrupt the process. Company records already deleted cannot be recovered except from a backup of your Act! data base.

When the delete process is completed a status box will display showing the results of the operation.
